

My New Species

Transition project

New shrimp 'Pink Floyd'

- discovered this year

- This new species was discovered off the pacific coast of Panama.
- It can make a noise so loud with its large pink claw that the noise can kill small fish! It then eats them.
- Scientists named the shrimp 'Pink Floyd' after the rock band famous for their loud music!

My New Species

We would like you to design a new species. There will be a vote for the best ones, with the winners receiving a prize when you move up to Fulford. Some things you could think about:

- Habitat
- Appearance
- Adaptations
- Diet
- Lifecycle
- Where is it in the food chain?
- Special features
- Anything else?!

How are you going to present this?

Presentation ideas:

- Fact file
- Top trump cards
- Leaflet
- Poster

If you choose to, you can create a presentation/fact file/poster etc.. In Google Classroom. You will then be able to share it with me.
