

		Progression of	Skills and Knowle	dge for Science		
		W	Vorking Scientifica	lly		
EYFS	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
Asking Questions -Answer 'how' and 'why' questions about their experiences and in response to stories or events. Asking Questions -Ask simple questions and recognise they can be answered in different ways.		Asking Questions -Ask relevant questions and use different types of scientific enquiries to answer them. -Set up simple practical enquiries, comparative and fair tests		Asking Questions -Plan different types of scientific enquiries to answer questionsRecognise and control variables where necessary -Explore and talk about their ideas; asking their own questions about scientific phenomena.		
Monitoring and Recording -Make observations of animals and plants and explain why some things occur, and talk about changes.	Monitoring and Recor -Observe closely, usir -Perform simple tests -Gather and record d answering questions.	g simple equipment.	Monitoring and Recording -Make systematic and careful observations. -Take accurate measurements using standard units, using a range of equipment (e.g. thermometers and data loggers). -Record findings using simple scientific language, drawings, labelled diagrams, keys, bar charts and tables. -Gather, record, classify and present data in a variety of ways to help in answering questions.		Monitoring and Recording -Make accurate measurements, using a range of scientific equipment with increasing accuracy and precision. -Take repeat readings when appropriate to consider fair tests. -Record data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs.	
features of their own immediate environment and how environments might vary from one another. suggest answers to questions. -Use age-appropriate scientific language environments might vary from one another. suggest answers to questions. -Use age-appropriate scientific language processes. -Report on findings from enquiries, including oral and written explanations, displays or presentations of results and conclusions. -Use straightforward scientific evidence to answer questions or support findings. *Begin to look for naturally occurring used to support or rearguments. -Report and present enquiries, including relationships and ex degree of trust in reconclusions. *Begin to look for naturally occurring -Draw conclusions by		indings from onclusions, casual lanations of and ults, in oral and				

		-Use, spell and read scientific vocabulary correctly.	ideas and use their scientific knowledge to explain their findings. *Use, spell, read and pronounce scientific vocabulary correctly.
Evaluating -Children know about similarities and differences in relation to places, objects, materials and living things.	Evaluating asking simple questions and recognising that	Evaluating -Use results to draw simple conclusions, make predictions for new values, suggest improvements and raise further questions -Begin to recognise when and how secondary resources might help them to answer questions that cannot be answered through practical investigation.	Evaluating - Test results to make predictions to set up further comparative and fair tests. -Recognise that scientific ideas change and develop over time.
Related National Curriculum Objectives in italics:	-asking simple questions and recognising that they can be answered in different ways -observing closely, using simple equipment -performing simple tests -identifying and classifying -using their observations and ideas to suggest answers to questions -gathering and recording data to help in answering questions	-asking relevant questions and using different types of scientific enquiries to answer them -setting up simple practical enquiries, comparative and fair tests -making systematic and careful observations and, where appropriate, taking accurate measurements using standard units, using a range of equipment, including thermometers and data loggers -gathering, recording, classifying and presenting data in a variety of ways to help in answering questions -recording findings using simple scientific language, drawings, labelled diagrams, keys, bar charts, and tables -reporting on findings from enquiries, including oral and written explanations, displays or presentations of results and conclusions	-planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary -taking measurements, using a range of scientific equipment, with increasing accuracy and precision, taking repeat readings when appropriate -recording data and results of increasing complexity using scientific diagrams and labels, classification keys, tables, scatter graphs, bar and line graphs -using test results to make predictions to set up further comparative and fair tests -reporting and presenting findings from enquiries, including conclusions, causal relationships and explanations of and a degree of trust in results, in oral and written forms such as displays and other presentations -identifying scientific evidence that has been used to support or refute ideas or arguments

-using straightforward scientific evidence to answer questions or to support their findings.
--

		Liį	ght and Sound		
Year 1	Year 2	Year 3	Year 4	Year 5	Year 6
		Light	How Sound Is Made, Travels and Can Be Changed		Light and How We See
		-There must be light for us to see. Without light it is dark. -Light comes from a source. -We need light to see things even shiny things. -Transparent materials let light through them and opaque materials don't let light through. -Beams of light bounce off some materials (reflection). -Shiny materials reflect light beams better than non-shiny materials	-Sound travel can be blocked. *Sound spreads out as it travelsChanging the shape, size and material of an object will change the sound it producesSound is produced when an object vibratesChanging the way an object vibrates changes it's soundSound moves through all materials by making them vibrateBigger vibrations produce louder sounds and smaller vibrations produce quieter soundsFaster vibrations (higher frequencies) produce higher pitched sounds.		-Light travels in straight linesLight reflects of all objects (unless they are black). Non- shiny surfaces scatter the light so we don't see a single beamAnimals see light sources when light travels from the source into their eyesAnimals see objects when light is reflected off that object and enters their eyes

-recognise that they need light in order to see things and that dark is the absence of light -notice that light is reflected from surfaces -recognise that light from the sun can be dangerous and that there are ways to protect their eyes -recognise that shadows are formed when the light from a light source is blocked by an opaque object -find patterns in the way that the size of shadows change	-identify how sounds are made, associating some of them with something vibrating -recognise that vibrations from sounds travel through a medium to the ear -find patterns between the pitch of a sound and features of the object that produced it -find patterns between the volume of a sound and the strength of the vibrations that produced it -recognise that sounds get fainter as the distance from the sound source increases	-recognise that light appears to travel in straight lines -use the idea that light travels in straight lines to explain that objects are seen because they give out or reflect light into the eye -explain that we see things because light travels from light sources to our eyes or from light sources to objects and then to our eyes -use the idea that light travels in straight lines to explain why shadows have the same shape as the objects that cast them.

	Electricity					
Year 1	Year	Year 3	Year 4	Year 5	Year 6	
	2					
			Making Electrical Circuits		Controlling Electrical Circuits	
			Work			
			-A source of electricity		-Batteries are a store of energy. This	
			(mains or battery) is		energy pushes electricity round the	
			needed for electrical		circuit. When the battery's energy is	
			devices to work.		gone it stops pushing. Voltage measures	
			- A complete circuit is		the 'push'.	
			needed for electricity to		-Current is how much electricity is	
			flow and devices to work.		flowing round a circuit.	
			-Electricity sources push		-The greater the current flowing through	
			electricity round a circuit.		a device the harder it works.	

	-More batteries will push the electricity round the circuit faster.	-When current flows through wires heat is released. The greater the current the more heat is released.
	-Some materials allow electricity to flow easily and these are called conductors. Materials that don't allow electricity to flow easily are called insulatorsDevices work harder when more electricity	more neat is released.
	goes through them -identify common appliances that run on electricity -construct a simple series electrical circuit, identifying and naming its basic parts, including cells, wires, bulbs, switches and buzzers -identify whether or not a lamp will light in a simple series circuit, based on whether or not the lamp is part of a complete loop with a battery -recognise that a switch opens and closes a circuit and associate this with whether or not a lamp lights in a simple series circuit	-associate the brightness of a lamp or the volume of a buzzer with the number and voltage of cells used in the circuit -compare and give reasons for variations in how components function, including the brightness of bulbs, the loudness of buzzers and the on/off position of switches -use recognised symbols when representing a simple circuit in a diagram

			conductors and associ	some common s and insulators, late metals with d conductors Dace	
Year Ye	ear	Year 3	Year 4	Year 5	Year 6
				-Stars, planets and moons have so much mass they attract other things, including each other due to a force called gravity. Gravity works over a distanceStars produce vast amounts of heat and light. All other objects are lumps of rock, metal or ice and can be seen because they reflect the light of starsObjects with larger masses exert bigger gravitational forces -Objects like planets, moons and stars spin -Smaller mass objects like planets orbit large mass objects like stars -describe the movement of the Earth and other planets relative to the sun in the solar system -describe the movement of the moon relative to the Earth -describe the sun, Earth and moon as approximately spherical bodies	
				-use the idea of the Earth's rotation to explain day and night and the apparent movement of the sun across the sky	
ı			Forces		1
rear Ye	ear	Year 3	Year 4	Year 5	Year 6
		Pushes, Pulls and Their Effects Magnets and Their Effects		Forces That Oppose Motion	

-	- Objects move in different ways; they roll, slide, bounce etcForces change how things move. We can change the way an object moves by pushing or pulling them. Sometimes pushing and pulling slows things down, sometimes it speeds them up and sometimes it makes it change direction.	- Air resistance and water resistance are forces against motion caused by objects having to move air and water out of the wayFriction is a force against motion caused by two surfaces rubbing against each other
	-Bigger pushes and pulls have bigger effectsObjects move differently on different surfaces -Rough surfaces create friction and slow moving objects downForces change shapesSometimes when an object is pushed, pulled or twisted it changes shape.	-Some objects require large forces to make them move; gears, pulley and levers can reduce the force needed to make things move.
	-Magnets exert attractive forces on some materialsMagnets exert attractive and repulsive forces on each otherMagnets exert non-contact forces, which work through some materialsMagnetic forces are affected by the magnets strengthMagnetic forces are affected by the mass of the object being attractedMagnetic forces are affected by the magnet and object.	
	-compare how things move on different surfaces -notice that some forces need contact between 2 objects, but magnetic forces can act at a distance	-explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object -identify the effects of air resistance, water resistance and
	-observe how magnets attract or repel each other and attract some materials and not others	friction, that act between moving surfaces
	-compare and group together a variety of everyday materials on the basis of whether they are attracted to a magnet, and identify some magnetic materials	-recognise that some mechanisms including levers, pulleys and gears allow a smaller force to have a greater effect
	-describe magnets as having 2 poles	
	-predict whether 2 magnets will attract or repel each other, depending on which poles are facing	

	Plants								
EYFS	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6			
	How Do Plants Grow?	Making New Plants	How Plants Make Their Food How Plants Reproduce						

		<u> </u>	- ,	1	1	
-They make observations of animals and plants and explain	Plants include trees (deciduous and evergreen), flowers (wild and cultivated) and hedges and bushesMost plants usually grow from seeds and bulbs.	-A seed produces roots to allow water to get into the plant and shoots to produce leaves to collects the sunlightAll flowering plants make seeds that	-Plants make their own food in their leaves to provide them with energy, grow, repair, and reproduceLeaves absorb sunlight and carbon dioxide through leaves.			
and explain why some things occur, and talk about changesChildren know about similarities and differences in relation to places, objects, materials and living things.	and bulbsPlants need warmth, light and water to grow and survive	-All flowering plants make seeds that can grow into new plants -Sometimes the plant dies after it has produced its seed and sometimes the plant lives for many generations producing seeds each year.	dioxide through leavesPlants have roots to provide support and to draw moisture from the soil, through stems to take water to the rest of the plantThe plant makes its food from water and carbon dioxide, using sunlight as energy, in the green parts of plants (mainly leaves) -Flowering plants have evolved specific parts to carry out pollination, fertilisation and seed growthSeed dispersal improves chances of enough seeds germinating and growing to mature plants and reproducingSeeds and bulbs need the right conditions to germinate. They contain a food store for the first stages of growth (i.e. until the plant is able to produce its own food)			

including pollination, seed formation

and seed dispersal

pro	operties			evaporation with	solution			
	nple physical			associate the rate of evaporation with temperature	-use knowledge of solids, liquids and gases to decide how mixtures might be separated, including through filtering, sieving and evaporating -give reasons, based on evidence from comparative and fair tests, for the particular uses of everyday materials, including metals,			
					everyday materials,			
					changes result in the formation of new materials, and that this kind of change is not usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda			

			Things and their Habitats		
Year 1	Year 2	Year 3	Year 4 Feeding Relationships and the Environment	Year 5	Year 6
	-All animals get their nutrients by eating. Some animals hunt and eat other animals (predators) and some animals are hunted and eaten by other animals (prey). -There is variation between all living things. -Different animals and plants live in different places. -All animals are adapted to eat and survive (they are adapted to survive as predators and prey). -Plants are also adapted to survive; they have adapted to get the water and light they need and avoid being eaten or dying when chewed. - Living things are adapted to survive in different habitats. -The changing seasons have a dramatic effect on plants, which has an impact on the animals that feed on them. Animals have adapted ways of surviving when the seasons change and food become scarce including hibernating, storing food (fattening up), migrating.		-Living things can be divided into groups based upon their characteristicsDifferent food chains occur in different habitatsEnvironmental change affects different habitats differentlyHuman activity significantly affects the environmentDifferent organisms are affected differently by environmental change	-Different animal groups have life cyclesChanges are observed in an animal over a period of timeDifferent animal groups reproduce and grow in different waysPlants and animals reproduce: sexual reproduction in animals, sexual and asexual reproduction in plantsExplore the work of well known naturalist (David Attenborough and Jane Goodall).	-Living things are broadly grouped (micro organisms, plants and animlas)Broad groups can be sub divided into vertebrates (reptiles, fish, amphibians, birds and mammals) and invertebrates (insects, molluscs, annelids, arachnids) Carl Linnaeus created a classification systemLiving things placed in classification system according to physical characteristics.
-	Longitudinal Study Identification of creatures and plants in the local environment and how		Longitudinal Study The identification and classification of	-	

their populations change through the	creatures and plants		
seasons. Linking the properties of the	in their local
